

HPV: WHAT YOU SHOULD KNOW

You're at risk, but protecting yourself is easy.

HPV is common

Human Papillomavirus (HPV) is a virus that is spread by intimate contact. **More than 80%** of sexually active adults will have an HPV infection in their lifetime.

Four of us will contract HPV in our lifetimes.

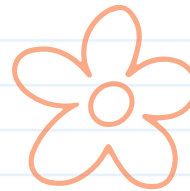

We're at risk for HPV-related cancers too.

HPV can cause cancer

HPV infections can cause cancer in both males and females. In total, HPV can cause **six types of cancer**, and yearly cases are rising.

HPV spreads silently

HPV infections don't usually cause symptoms. Someone could spread HPV to you **without even knowing**.

Which one of us has an HPV infection?

HPV vaccines work

The HPV vaccine is linked to nearly a **100% reduction in HPV-related cancers** in both males and females.

HPV vaccines are free!

You can get the vaccine **for free in Alberta** if you are 26 or younger.

The HPV vaccine protects ALL of us!

Free back to school protection!

GET THE HPV VACCINE!

IT'S SAFE. IT WORKS. IT'S FREE.
